A Forum Overview

This section provides an overview of the three key forums used in each country.

Customary Forums

Customary forums are conflict resolution mechanisms governed by institutional rules that draw their legitimacy from custom, tradition, or indigeneity. Such “customary laws” derive their authority from their connections to precolonial practice and to identity, as sets of laws that have been transferred within communities across generations (Ndulo 2011). The leaders within these customary institutions are often known as chiefs, traditional authorities, and village heads. Here, we use the term customary authority to refer to this set of actors. Such leaders directly or indirectly oversee customary conflict resolution forums, which can include different configurations of committees and courts. While the origins of customs and traditions are often associated with shared ethnicity, customary institutions in these contexts are political institutions that govern community life for residents based on territory, regardless of their ethnicity. Even as decisions may be shaped by ethnicity, customary forums are not exclusively reserved for co-ethnics.

Zambia and Malawi have similar systems of customary authority, in contrast to Kenya’s. In both countries, the British colonial regime mapped chieftaincy systems throughout the entire territory as part of a governance regime of indirect rule through official chiefs. The colonial policy was to reinforce and instrumentalize the pre-existing political institutions to facilitate colonial domination, tax collection, etc. They upheld (and changed) the judicial powers of chiefs by creating “native courts” that were designed to adjudicate conflicts following “African law” (Bande 2020; Spalding et al. 1970; Wanda 1988; Hailey and Mitchell 1951).

The governments of independent Zambia and Malawi then largely retained the status quo of allowing chiefs to govern within bounded territories.²⁶ In addition to conflict resolution, CAs in this context are involved in land governance and local public goods provision such as mobilizing education funds (Baldwin et al. 2023). These chiefs are embedded in hierarchical networks of customary authority, with titular positions of paramount chiefs, senior chiefs, group village heads, and village heads, as well as authority positions unique to each individual institution such as the Bashilubemba councillors of Zambia’s Bemba institutions (Honig 2022).

British colonial rule in Kenya differed from Malawi and Zambia, contributing to contemporary differences in their customary authority systems. The colonial regime in Kenya more directly governed land and weakened customary authorities in an effort to promote white settler farming. This includes the 1954 Swynnerton Plan in Kenya, the first mass land registration campaign on the continent. Furthermore, British colonial architects in Kenya described their own failures to reinforce the power of “indigenous judicial bodies” because precolonial nations in the area were “loosely organized” (Phillips 1952, 135).

As a result, contemporary Kenya features statutory administrative chiefs and custom-

²⁶One notable difference between the two countries is that in Malawi, the positions of Group Village Head and Village Head are codified by the state, while in Zambia, only the chieftaincy and the role of chief’s assistants (kapasos) is codified. As a result whether a chiefdom has a hierarchical system of Group Village Heads or Zonal Village Heads varies by chiefdom. This is consistent with the greater autonomy of Zambia’s chiefs than Malawi’s.

ary village elders. The titular "chief" in Kenya is an appointed bureaucrat and, therefore, a statutory forum for conflict resolution, while village elders function as customary authorities (Porisky 2020; Nyamweru and Chidongo 2018; Ensminger 1996). Consequently, Kenya's most important customary conflict resolution forum is its councils of elders (Helbling et al. 2015). These leaders draw legitimacy from indigenous institutions, and can include locally-elected leaders or senior members of clans, among other selection logics (Helbling et al. 2015).

State Forums

State forums are the systems established to directly implement or represent state law. This includes the state police force, judges, and magistrates. State forums may be under the authority of elected local government councils, such as the county governments in Kenya or the district councils in Malawi and Zambia, or appointed by the central state, such as the district commissioners (DCs) in Malawi and Zambia. All three countries feature hierarchical chains of state courts. Kenya's statutory legal system is organized from district magistrate's courts through High Courts, the Court of Appeals, and the Supreme Court. In Zambia and Malawi, Local Courts are the lowest level in the statutory hierarchy.²⁷ While Local Courts may draw on (their interpretations of) customary law in conflict adjudication, they are headed by magistrates who may have been transferred from elsewhere and may not speak the local language (Spalding et al. 1970).

Other Community Forums

Outside of statutory and customary conflict resolution forums, citizens in Zambia, Malawi, and Kenya also relied on other community members to resolve their conflicts instead of using customary or state authorities. Some disputants in all three countries sought help from neighbors, friends, extended family members, and other community members without official positions. This practice is indicative of the importance of social networks and horizontal ties within community conflict resolution, as alternatives to customary and statutory authority structures.

²⁷On Malawi, see [Bande \(2020\)](#).

B Sample Characteristics

Tables B1 and B2 provide an overview of the disputant sub-sample in relation to the full survey sample. Table B3 presents summary statistics on the disputant sub-sample by country. Table B4 reports summary statistics by dispute type.

All three country sub-samples (of respondents with disputes) are skewed female, with Malawi having the largest imbalance between male and females. The majority of the sample is between the ages of 18 and 35 with the Kenyans slightly younger and significantly more likely to live near the district capital than the Malawi and Zambia samples. Most respondents are migrants, though majority had resided in the community for more than 10 years, are married, and have at least primary school education. The Malawi sample is dominated by respondents who are members of the local ethnic majority (71.6%), and a sizable proportion of our interviewees are low-income (80% of the overall sample).

Table B1: Full Sample of Households with and without Disputes Summary Statistics

		Non-Dispute Sample		Dispute Sample		Total Sample	
		n	%	n	%	n	%
Gender	Male	7,766	39.3	1,687	40.0	9,453	39.5

Total		19,738	100.0	4,216	100.0	23,954	100.0

Notes: The table provides summary statistics of the non-dispute and dispute households samples. Respondents are divided into three age groups from the youngest to the oldest. Respondent distance away from the administrative district capital (admin) is divided into those who could travel in less than an hour, and those who travelled for more than an hour. Distance to the national capital (N.) is also split into respondents who could travel in less than two hours and those who travelled for more than two hours. In the regression analysis, the continuous form of the three variables is used.

Table B2: Balance Table of Means: Non-Dispute Sample versus Dispute Sample

	Non-Dispute Sample	Dispute Sample	Difference
Gender	1.607 (0.489)	1.600 (0.490)	-0.007 (0.420)
Age	1.522 (0.702)	1.480 (0.661)	-0.042*** (0.000)
Migrant (10 years)	0.462 (0.499)	0.421 (0.494)	-0.042*** (0.000)
Native	0.250 (0.433)	0.262 (0.440)	0.012* (0.095)
Ethnic Majority	0.510 (0.500)	0.567 (0.496)	0.057*** (0.000)
CA Related	0.128 (0.334)	0.165 (0.371)	0.037*** (0.000)
Education Level	2.434 (0.798)	2.427 (0.739)	-0.007 (0.612)
Marital Status	1.649 (0.477)	1.657 (0.475)	0.007 (0.365)
Distance to District	1.374 (0.484)	1.356 (0.479)	-0.019** (0.023)
District to N. Capital	1.537 (0.499)	1.557 (0.497)	0.019** (0.023)
High Income	0.254 (0.435)	0.205 (0.404)	-0.049*** (0.000)
Observations	19,738	4,216	23,954

Notes: Significance levels * 10% ** 5% *** 1%. The table presents the two-sample t test with equal variances. Results from the Pearson's chi-square test of independence are similar with results showing no significant difference in means for marital, gender and native at the 10 percent level.

Table B3: Dispute Sample Summary Statistics by Country

		Kenya		Malawi		Zambia		Total	
		n	%	n	%	n	%	n	%
Gender	Male	302	50.0	919	39.0	900	39.1	2,121	40.3

Notes: The table provides summary statistics of the dispute sample, by household/respondent attributes and country. Respondents are divided into three age groups from the youngest to the oldest. Respondent distance away from the administrative district capital (admin) is divided into those who could travel in less than an hour, and those who travelled for more than an hour. Distance to the national capital (N.) is also split into respondents who could travel in less than two hours and those who travelled for more than two hours. In the regression analysis, the continuous form of the three variables is used.

Table B4 reports summary statistics by dispute type. Economic disputes were the most commonly reported dispute types among the Malawi (43%) and Zambia dispute samples (41%), while criminal disputes were the most frequently reported dispute type within the Kenya sample; 51% of Kenyan disputes were criminal, compared to 41% economic in nature.

Table B4: Sample Summary Statistics by Type of Dispute and Household Attributes

		Crime		Economic		Social		Political		Total	
		n	%	n	%	n	%	n	%	n	%

Notes: The table presents the characteristics of individuals based on the type of actor/ forum they turned to for the dispute the household was involved in. Due to the small sample size, we exclude those who turned to other forums (n=45) or to multiple forums (n=106).

C Variable Definitions and Coding

Table C1: Definitions for Key Respondent-Level Variables

Variable	Definition
Dispute	Whether respondent reported that the household experienced a dispute or a crime in the past 12 months, based on the questions: "Since [month] of last year, have you or anyone in your household been engaged in a dispute, such as disputes over land, water, custody or other issues not involving violent crime?" and "Since [month] last year, have you or someone in your household been the victim of a crime, such as a theft, assault, or murder or kidnapping of friend or family member?"
Dispute Type	Economic disputes are those involving contracts, resources required for economic productivity, and public goods contributions (such as "garbage collection" and "electricity"). Social disputes relate to the family and social norms. This includes marital disputes as well as reports of "witchcraft accusations," "girl child pregnancy," and "gossiping." Criminal disputes are thefts, assaults, and other acts that are crimes in the country's laws. Political disputes are disputes described as being about ethnicity, elections, politics, the chieftaincy, and religious differences.
Education	Ordinal variable of respondent education categorized as: Little to No Schooling, Primary Schooling, Secondary Schooling, Post Secondary Schooling.
CA Related	Respondent reported that a customary authority in the village/neighborhood was a family relation
Distance to District	Minutes travel time from the household to the district capital (Malawi and Zambia) or county capital (Kenya) based on google maps data. Standardized for interpretation.
Distance to N. Capital	Minutes travel time from the village to the national capital based on google maps data. Standardized for interpretation.
Economic Insecurity	Ordinal variable of increasing levels of insecurity based on self-reported evaluation that "Our household income covers the needs well—we can save," "Our household income covers the needs alright, without much difficulty," "Our household income does not cover the needs, there are difficulties," "Our household income does not cover the needs, there are great difficulties."
Male	Respondent Gender
Age	Self-reported respondent age. Standardized for interpretation.
Migrant	Respondent reported having lived in the community for 10 years or less based
Ethnic majority	Whether respondent's self-reported ethnicity is the majority in the village sample

R-squared	0.159	0.153	0.155	0.174	0.147
N	690	690	278	312	196

Significance levels * 10% ** 5% *** 1%. Notes: OLS results. Dependent variable is the share of disputants who reported going to nobody in villages with a minimum of 10 respondents. Alternate FPI is an alternative specification of the FPI that aggregate all forums into three categories: state, customary, or other community member. Sample restricted to villages with at least 5 disputants who used a forum in the restricted column. ^ϕ Base for the Malawi Regression is the Malawi Border. Standard errors clustered at the Province (Kenya/Zambia) or District level (Malawi).

Table D4: Split Sample Model - Association Between FPI and Opting Out of Dispute Resolution

Dependent Variable	Share reported nobody		
	Base Model	Restricted	Unrestricted
District FPI	-0.233** (0.06)	-0.294*** (0.09)	-0.237** (0.10)
Total Disputes (District)	0.000 (0.00)	0.000 (0.00)	0.000 (0.00)
LGPI Sample (Base: Zambian Border)			
Lusaka		0.083 (0.10)	0.081 (0.10)
Malawi Border		0.026 (0.06)	0.019 (0.06)
Lilongwe		0.011 (0.07)	0.016 (0.07)
Nairobi		0.215** (0.10)	0.215** (0.10)
Constant	0.515*** (0.03)	0.524*** (0.07)	0.494*** (0.08)
R-squared	0.063	0.154	0.117
N	91	90	91

Significance levels * 10% ** 5% *** 1%. Notes: District FPI was calculated using one half of the dataset. Share Reported Nobody was calculated at the district-level using the other half, to ensure that the same data was not being used for the main predictor and outcome. OLS model with standard errors clustered at the province level. Sample restricted to villages with at least 10 disputants who used a forum in the restricted column.

N	4946	2060	2889	4946	4366	2313

Significance levels * 10% ** 5% *** 1%. Notes: Notes: Multilevel logistic regression models clustered at the sample, household, and village levels. Outcome is use of any forum. All models also include control variables of: ethnic majority, age, ELF, village proportion migrants. Models 5 and 6 include additional restrictions for interpretation of the village FPI coefficient. Model 5 is restricted to communities with 10 or more respondents. Model 6 is restricted to communities with 5 community members using a forum and 10 respondents.

E Additional Tables and Figures

Table E1: Naive and Unrestricted Models - Association Between FPI and Opting Out of Dispute Resolution

Dependent Variable	Share Reported Nobody		
	Naive	Restricted	Unrestricted
Village FPI	-0.101** (0.04)	-0.208*** (0.04)	-0.166*** (0.04)
Total Disputes		0.013** (0.00)	0.016** (0.01)
Constant	0.380*** (0.03)	0.334*** (0.03)	0.271*** (0.03)
R-squared	0.013	0.083	0.096
N	691	691	842

Significance levels * 10% ** 5% *** 1%. Notes: The table shows the results from the naive and unrestricted models and presents the probability of opting out of any dispute resolution platform available in the village based on selected attributes. The unrestricted model removes restrictions on the village sample size. Standard errors clustered at the Province (Kenya/Zambia) or District level (Malawi).

Figure E1: Density Plots of Village FPI with varying number of disputes and sample size
Notes: The figure depicts the degree of forum pluralism at the village level when we vary the sample size and disputes included. The results generally show that forum pluralism is prevalent but as the restrictions on disputes where people turn to a forum reduces, the village forum pluralism index is inflated particularly for those who reported going to the same forum (FPI = 0 increases). As the limit on disputes increases, we see increased forum pluralism in the sampled villages. This justifies the need for thresholds and the choice of 10 respondents and 5 disputes in our baseline model.
